

Streamlining Patient Care with Job Module for Mobile Medical Units

INTRODUCTION

Waste management involves a complex system of activities, including waste collection, transportation, processing, and disposal. These activities require effective coordination and communication between different stakeholders, including waste management companies, municipalities, and regulatory bodies. Job module software can help streamline waste management processes and improve operational efficiency.

CHALLENGES

One of the major challenges in managing mobile medical units was lack of real-time tracking and monitoring of the units. Without proper tracking, it was difficult to ensure that the units are reaching their intended destinations on time and providing quality medical care.

In addition, managing the schedules of healthcare providers and tracking their performance was time-consuming and complex.

M1 - 9457
Emergency

Running
Since 02:00 PM

Details

Driver	Damen Ros
Status	Not assigned
ETA	Not defined
Location	Near University Hospital

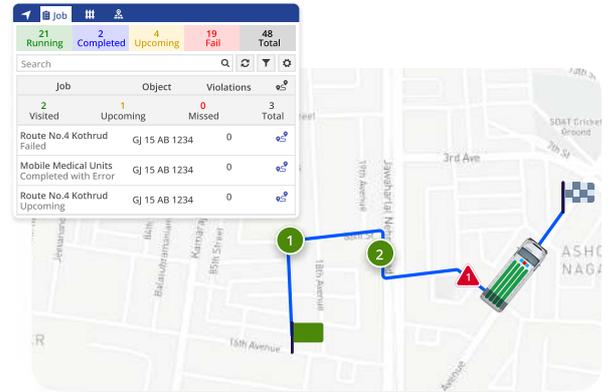

SOLUTIONS

The implementation of job module software helped address these challenges.

Our software was used to create schedules for mobile medical units, and assign tasks to healthcare providers.

It also tracked the progress of medical services provided. Real-time tracking was also set up to monitor the location of the units and ensure that they are reaching their intended destinations on time.

The software also generated various reports and monitored the performance of medical staff. This helped identify areas where improvements were made and ensured that high-quality medical care has been provided.

Driver Job Summary								
Company	Driver	Distance	Total Job Cost	Allocated Job	Completed Without Issue	Completed With Issue	Failed	Total Alert
Pimex Medical	Zahoor Al Hira UAE	337.0	1348.0	14	12	2	0	5
Pimex Medical	Kinjal	399.0	1484.0	6	6	0	0	0
Pimex Medical	Nisarg	420.0	3208.0	4	3	1	0	2
Pimex Medical	Jinesh	332.0	1328.0	20	15	5	0	0
Pimex Medical	Sunny	337.0	1348.0	2	2	0	0	0
Pimex Medical	Farhad	426.0	1348.0	1	1	0	0	0

RESULTS

Improved efficiency – With the ability to assign tasks and schedule appointments, the software reduces the need for manual scheduling and increases efficiency, allowing healthcare providers to see more patients in less time.

Real-time data - The software provides real-time data on the location and progress of mobile medical units, enabling healthcare providers to make informed decisions about patient care and adjust schedules accordingly.
